How to use your Star Finder

1. Rotate the star wheel so the date aligns with the time. Use the "DST" scale if you are currently on Daylight Savings Time.
2. Hold the Star Wheel in the cover so it doesn't move. Turn the entire Star Finder so the direction you're facing is at the bottom. For example, if you're facing North, rotate the Star Finder so you can read the word "North".
3. The edge of the opening shows the horizon. Stars toward the Eastern side are rising, and stars toward the Western side are setting. Stars near the center of the opening are overhead.

FOR LATITUDES BETWEEN 40°N AND 50°N
